Precise by nature

Denester for trays, using pressure relief system

The tray denester for soft and hard trays is camshaft driven and includes a special head pressure relief system for tray stacks.

By means of a sucking disc the dispenser picks up trays one by one from a magazine placed above and then places them on conveyor placed underneath for subsequent processing steps. The standard discharge height is 900 mm, but this is adjustable.

The dispenser has a magazine for 1, 2 or 4 lanes. The format set can, with only a few change parts and no heavy parts, be replaced by another format set for other tray dimensions.

Application

- Stackable plastic container with round or square dimensions max 175x185 mm

Functionality

- Control of dispensed containers
- Vacuum operation system
- Sucking disc placed on pneumatic cylinder
- Magazine conveyor - optional
- Exchangeable formats
- Dispenser for 1, 2 or 4 lanes

Capacity		
Volume per lane	pcs/min	60

Dimensions	mm	Length	Height	Width
