

Cutter

Bean

PRODUCT SHEET

Advantages

- Excellent cutting
- No blocking
- Easy to clean
- By-pass for whole bean production
- Exchangeable cutting tool
- Stainless steel machine
- Central greasing system
- SEW gear motor
- JVM vibrator
- Gentle product handling

Cabinplant
Precise by nature

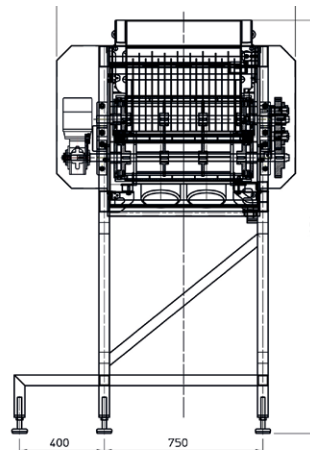

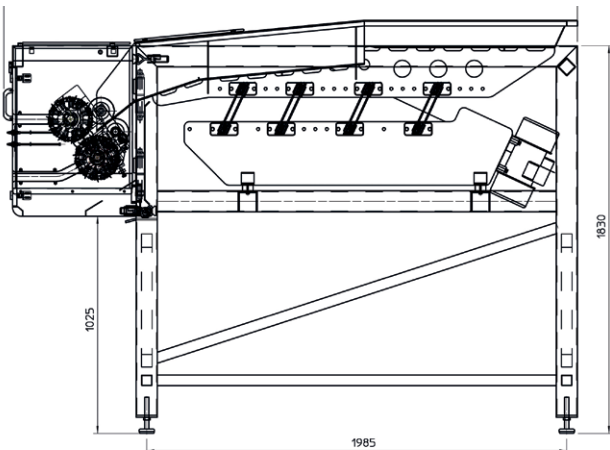

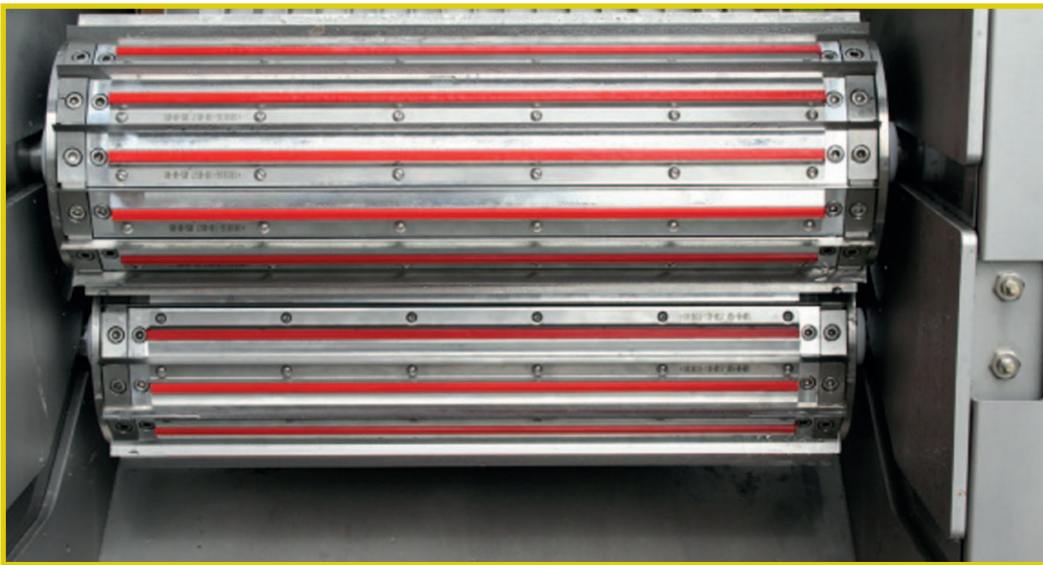

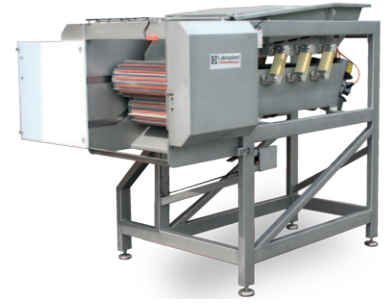

Predefined cutting of beans

Cabinplant's bean cutting machine is designed to cut green beans into predefined lengths.

The beans are fed from the integrated vibrator, where they are orientated longitudinally to ensure correct feeding to cutting tools.

The cutting tools are equipped with a number of knives and knife cutting bases. The beans are cut in predefined lengths, defined by the cutting tool.

Various cutting tools: 13, 16, 25, 30, 32, 39 mm - other tools on request.

Application

- Green beans (round or flat)

Functionality

- Longitudinally oriented beans are being fed to two synchronously counter-rotating knife drums which cut the beans.
- Vibrator infeed system

Capacity			
Volume	t/hour	3.5	

Dimensions				
	mm	Length	Height	Width
Bean cutter		2100	1830	1150
