

## Potato halving and quartering machine DMA-60

### Operating principle

The DMA-60 has the capability to cut the potatoes into 2, 4 or 6 pieces.

The DMA-60 is free standing and constructed in stainless steel and consists of 3 major components drive mechanism, aligning rollers and a cutting section with knife block. For equal filling of the positioning rollers with potatoes the machine is set up with a vibration chute. The machine has a frequency drive system.

The drive mechanism consists of rotating aligning rollers, which are driven from both sides of the machine. The self aligning rollers have a diablo profile, which can facilitate 4 potatoes across the width of the roller bed. The product is transported by an indexing system, which advances 3 rows forward to the cutting section.

The knife block can (optionally) halve the product on one side of the machine and produce 4 or 6 segments on the opposite side.

### Capacity

Approx. 16.000 - 20.000 potatoes/hour.

### Scope of supply

- > control panel
- > frequency controlled drive motors
- > vibration chute
- > machine safeties

### Options

- > collection belt for small pieces underneath the machine (L= 2.230 mm)
- > collection/bypass belt underneath the machine (L= 3.500 mm)

**Features**

- > several kind of cutting knives available
- > long shelf life
- > easy mounting / de-mounting of the cutting knives
- > hygienic design
- > simple operation
- > durable, hard-wearing and reliable
- > ease of access

**Product specification**

The maximum product size is 75 x 140 mm, the diameter minimal 40 mm.

**Technical data**

Voltage:	230/400 V,50/60 Hz, 3 ph
Total installed power:	0.75 kW
Water connection:	1/2 " BSP
Weight:	approx. 950 kg (2,090 lbs)
Dimensions (LxWxH):	approx. 2.840 x 1.000 x 2.150 mm

x= options
